

OIBSIP Data Analytics - Level 1 Task 2

Unemployment Analysis with Python

Objective

The objective of this project is to analyze unemployment trends in India using Python and identify patterns across different regions and time periods.

Dataset

The project uses the **Unemployment in India** dataset.

Tools Used

- Python
- Pandas
- Matplotlib
- Seaborn
- Jupyter Notebook

Analysis Performed

- Data loading and cleaning
- Handling missing values
- Removing empty rows and duplicate records
- Region-wise average unemployment analysis
- Month-wise unemployment trends
- Time-series analysis for three regions
- Top 10 regions by average unemployment
- Correlation analysis
- Pre-COVID vs Post-COVID comparison

Conclusion

The analysis provides an overview of unemployment patterns across different regions and time periods in India. It also examines changes in unemployment during the COVID-19 period.
